## REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method and apparatus of decompressing a set of sub-sampled image data, wherein the sub-sampled image data is arranged in an  $A \times B$  array of pixels. The closest prior art, Foley (USPN 5,450,130), shows a similar system, in which, a method and system for compressing color video or other image data for transmission over a low cost, low bandwidth bus, wherein lossless compression and includes a frame buffer for storing data compressed in accordance with the invention, and circuitry for decompressing and transforming compressed data read from the frame buffer, the image data are typically organized as a sequence of frames, each comprising a sequence of pixels, data compressed in accordance with the invention are stored in cells in memory, with each cell storing the same number of pixels. However, Foley fails to address: "for reading a first subset of the sub-sampled image data into a cache memory and into a buffer, wherein the buffer has an amount of memory equal to or less than the cache memory, and is configured to hold an  $A \times C$  array of pixels of the decompressed image data, wherein  $C$  is less than  $B$ ". This distinct feature has been added to all independent claims and render them allowable.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
